EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. The application has been amended as follows: A colon (:) has been inserted after the term "having" in line 1 of claim 1. The term "align" has been replaced with the term -aligned- in line 16 of claim 1.

Drawings

3. The drawings were received on 26 October 2004. These drawings are approved.

Allowable Subject Matter

4. Claims 1-3 are allowed.

5. The following is an examiner's statement of reasons for allowance: The claims as amended, setting forth a wheel assembly having a connector with a wheel attached at each end, wherein the connector includes a pair of spindles having a first end mounted through the center of the wheel and a second end, two protrusions securely connected to the respective second ends of each spindle and including a free end; a first upright step is defined on the free end of one of the protrusions, and is mated to a second

Art Unit: 3617

upright end on the free end of the other protrusion to form the connector; a through hole is transversely defined through the first and second upright steps; a wheel stand with a bracket having a hole aligned with the through holes of the protrusions is pivotally connected to the connector by a pivot pin; and a resilient body is mounted between the protrusions; have been found to be allowable over the prior art. The prior art does not teach or suggest a wheel assembly having the configuration described above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references are considered to show wheel assemblies having pivotal connections allowing the wheels to move vertically independently from one another. For example, Codd shows a wheel assembly having vertically independent wheels.
